Psychology and Its Allied Disciplines - M. H.

Bornstein 2013-04-15

Published in 1984, Psychology and its Allied Disciplines is a valuable contribution to the field of Developmental Psychology.

Darwinism, War and History - Paul Crook

1994-03-17

An exciting reinterpretation of Social Darwinism, questioning conventional assumptions and proffering an alternative reading of a discourse of 'peace biology'.

The Darwin Effect - Jerry Bergman 2014-09-26

Dr. Miklos Nyiszli, an imprisoned doctor in the Auschwitz camp, wrote that Nazi doctors hoped studying twins would solve the problem of faster reproduction of superior races. Nazis hoped to have each German mother bear as many twins as possible. What Darwin influenced went far

beyond the Nazi death camps: Shocking political, social, and scientific legacies of Darwin and his family. Disturbing disclosure of how over 45 million Christians were killed in the 20th century because of their faith. Revealing and layman-friendly presentation. This book is the result of 30 years of research and study carefully documenting the common destructive threads that tie some of history's most murderous dictators, uncaring capitalists, and aggressive social activists to the flawed concepts of Charles Darwin in an effort to change the world — and how they succeeded. The extermination of races considered "lower" than others, the profound lack of empathy for less-advanced cultures, the corrupted atheistic justifications for taking the lives of millions — all done to advance the agendas of social Darwinism at work in the

world today. More than mere theoretical discussions, we have seen the horrifying evidence of the practical results when applying these destructive and misleading concepts to society in the last 100 years!

The Four Horsemen: Racism, Sexism, Militarism, and Social Darwinism. [By Ethel Tobach [And Others]]. - 1973

The Darwinian Heritage - David Kohn
2014-07-14

Representing the present rich state of historical work on Darwin and Darwinism, this volume of essays places the great theorist in the context of Victorian science. The book includes contributions by some of the most distinguished senior figures of Darwin scholarship and by leading younger scholars who have been transforming Darwinian studies. The result is the most comprehensive survey available of Darwin's impact on science and society. Originally published in 1986. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Chicago's New Negroes - Davarian L. Baldwin
2009-11-30

As early-twentieth-century Chicago swelled with an influx of at least 250,000 new black urban migrants, the city became a center of consumer capitalism, flourishing with professional sports, beauty shops, film production companies, recording studios, and other black cultural and communal institutions. Davarian Baldwin argues that this mass consumer marketplace generated a vibrant intellectual life and planted seeds of political dissent against the dehumanizing effects of white capitalism. Pushing the traditional boundaries of the Harlem Renaissance to new frontiers, Baldwin identifies a fresh model of urban culture rich with politics, ingenuity, and entrepreneurship. Baldwin

explores an abundant archive of cultural formations where an array of white observers, black cultural producers, critics, activists, reformers, and black migrant consumers converged in what he terms a "marketplace intellectual life." Here the thoughts and lives of Madam C. J. Walker, Oscar Micheaux, Andrew "Rube" Foster, Elder Lucy Smith, Jack Johnson, and Thomas Dorsey emerge as individual expressions of a much wider spectrum of black political and intellectual possibilities. By placing consumer-based amusements alongside the more formal arenas of church and academe, Baldwin suggests important new directions for both the historical study and the constructive future of ideas and politics in American life.

Ontogeny - P. P. G. Bateson 2012-11-28

This volume is devoted principally to the theme of behavioral development. The study of ontogeny has attracted some of the most bitter and protracted controversies in the whole field of ethology and psychology. This is partly because the arguments have reflected more general and continuing ideological battles about nature and nurture. In the opening essay, Oppenheim shows how these debates have recurred in much the same form over the last century. His chapter also brings out a more worrying feature of such argument. He demonstrates that authors who are well known for their strongly held partisan views have written in much more balanced ways than is usually admitted. Although the excluded middle is familiar enough in academic argument, the dynamic tensions actually present in developing systems may be particularly prone to polarize debate about what is actually happening. This point is elegantly explored by Oyama in her essay on her concept of maturation.

Racism - Albert J. Wheeler 2005

Of all mankind's vices, racism is one of the most pervasive and stubborn. Success in overcoming racism has been achieved from time to time, but victories have been limited thus far because mankind has focused on personal economic gain or power grabs ignoring generosity of the soul. This bibliography brings together the literature.

World Military History Bibliography - Barton Hacker 2003-06-01

Preclassical and indigenous nonwestern military institutions and methods of warfare are the chief

subjects of this annotated bibliography of works published 1967–1997. Emphasis is on historical studies of military organization and the relationships between military and other social institutions.

Handbook of Child Psychology, Theoretical Models of Human Development - William Damon 2006-05-19

Part of the authoritative four-volume reference that spans the entire field of child development and has set the standard against which all other scholarly references are compared. Updated and revised to reflect the new developments in the field, the *Handbook of Child Psychology, Sixth Edition* contains new chapters on such topics as spirituality, social understanding, and non-verbal communication. Volume 1: *Theoretical Models of Human Development*, edited by Richard M. Lerner, Tufts University, explores a variety of theoretical approaches, including life-span/life-course theories, socio-culture theories, structural theories, object-relations theories, and diversity and development theories. New chapters cover phenomenology and ecological systems theory, positive youth development, and religious and spiritual development.

The Four Horsemen: Racism, Sexism, Militarism, and Social Darwinism - Ethel Tobach 1974

Social Sciences - 1977

Final Solutions - Richard M. Lerner 2010-11
The nature-nurture debate continues to stir controversy in the social and behavioral sciences. How much of human behavior and development can be attributed to biology and how much to the environment? Can either be said to &“determine&” human development? And what are the implications of each view for society? In this important study, a noted developmental psychologist contributes to this debate by confronting the difficult issue of &“doctrines&” of human development and the consequences for society of deriving political programs and public policy from them. Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil, Richard Lerner considers the recent history of one such idea, biological determinism, which at times has had the backing of respected

scientists, intellectuals, and political leaders. During this century, biological determinism has been coupled with political philosophies that hold that some people are inherently better than others. This has meant that certain groups of people&—Jews, Blacks, Native Americans, women&—have been stigmatized because of supposedly innate, even &“biological,&” differences, with sometimes disastrous consequences. The most notorious instance was Nazi Germany, where &“racial science,&” given legitimacy by the scientific community, became a cornerstone of the Nazi &“Final Solution.&” Meanwhile, theories of biological determinism continue to find adherents within the scientific community. Konrad Lorenz, who was awarded a Nobel Prize in 1973, was a critical figure in the development of the most recent manifestation of biological determinism&—sociobiology. Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society. He fears that biological determinism may again be co-opted to serve the political agenda of today&’s reactionary politicians. In fact, Lerner notes, sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races.

The Four Horsemen: Racism, Sexism, Militarism, and Social Darwinism - Ethel Tobach 1973

Planning Ethically Responsible Research - Joan E. Sieber 1992

This text provides readers with the knowledge to plan ethically responsible social and behavioural research. It includes instructions on development of an effective protocol; methods for handling issues of confidentiality, consent, privacy and deception; ways to assess risk and benefit to optimize research outcomes; and more.

National Library of Medicine Current Catalog - National Library of Medicine (U.S.) 1974

First multi-year cumulation covers six years: 1965-70.

Canada's Mental Health - 1974

Nature and Nurture - Cynthia Garcia Coll

2014-04-04

What does it mean to find a gene or set of genes that are associated with ADHD, schizophrenia, or autism? Could we eradicate such diseases from our species through gene therapy? Is it possible to eradicate from our genome the genetic material that predisposes us to be too aggressive, too shy, less intelligent, or not active enough? Who has the political power and/or moral authority to make these decisions? The premise of Nature and Nurture is that the complexity of the transactions between nature and nurture--between genes and the environment from the cellular to the cultural level--make these questions incredibly complex and in need of careful attention by educators, scientists, the public, and policymakers. A product of the conference held at Brown University in 2001, this book suggests that genes and environments work together interactively in a complex and closely

intertwined fashion. The contributors to this book--biologists, psychologists, psychiatrists, and economists--present knowledge that enables research and application to transcend the traditional question of whatever variance or significance is attributed to genetics versus environment in the development of a particular behavioral trait. This book presents a variety of views on the current status of knowledge about the ways in which dynamic, developmental, mutually interactive systems in the genetic and environmental domains operate. The chapters represent contributions from different perspectives.

The Four horsemen -

The Transformative Mind - Anna Stetsenko

2016-12

This book's innovative transformative stance revives the critical-activist gist of Vygotsky's project to move beyond theoretical-ideological canons in addressing the crisis of inequality.
