Marihuana - E.L. Abel

2013-06-29

Of all the plants men have ever grown, none has been praised and denounced as often as marihuana (*Cannabis sativa*).

Throughout the ages, marihuana has been extolled as one of man's greatest benefactors and cursed as one of his greatest scourges.

Marihuana is undoubtedly a herb that has been many things to many people. Armies and navies have used it to make war, men and women to make love. Hunters and fishermen have snared the most ferocious creatures, from the tiger to the shark, in its herculean weave.

Fashion designers have dressed the most elegant women in its supple knit.

Hangmen have snapped the necks of thieves and murderers with its fiber. Obstetricians

have eased the pain of childbirth with its leaves.

Farmers have crushed its seeds and used the oil within to light their lamps. Mourners have thrown its seeds into blazing fires and have had their sorrow transformed into blissful ecstasy by the fumes that filled the air. Marihuana has been known by many names: hemp, hashish, dagga, bhang, loco weed, grass-the list is endless. Formally christened *Cannabis sativa* in 1753 by Carl

Linnaeus, marihuana is one of nature's hardiest specimens. It needs little care to thrive. One need not talk to it, sing to it, or play soothing tranquil Brahms lullabies to coax it to grow. It is as vigorous as a weed. It is ubiquitous. It flourishes under nearly every possible climatic condition.

Maternal Child Nursing

Care - Shannon E. Perry 2010
This market-leading textbook provides just the "right amount" of maternity and pediatric content in an easy-to-understand manner. Divided into two sections, the first part of the book includes 28 chapters on maternity nursing and the second part contains 27 chapters covering pediatric nursing. Numerous illustrations, photos, boxes, and tables clarify key content and help you quickly find essential information. And because it's written by market-leading experts in maternity and pediatric nursing, you can be sure you're getting the accurate, practical information you need to succeed in the classroom, the clinical setting, and on the NCLEX(R) examination. UNIQUE! Nursing Alerts point out critical information to consider when caring for patients. UNIQUE! Guidelines boxes outline instructions for skills or procedures in an easy-to-follow, step-by-step format. UNIQUE! Emergency boxes offer quick reference to

emergency procedures for critical maternity and pediatric emergencies. UNIQUE! Home Care boxes offer helpful guidelines for delivering effective care in the home environment. UNIQUE! Atraumatic Care boxes in the pediatric section illustrate how to provide competent nursing care without creating undue physical or psychological stress for pediatric patients, families, and nurses. UNIQUE! Community Focus boxes examine community issues and provide resources and guidance on caring for families outside the clinical setting. UNIQUE! Cultural Awareness boxes address culturally competent care for patients with a variety of customs and beliefs. UNIQUE! Family-Centered Care boxes discuss the family's role and needs in caring for the patient. UNIQUE! Nursing Process boxes offer quick access to nursing process information for major diseases and conditions. Critical Thinking Exercises provide case scenarios to promote sound clinical decision

making. Nursing Care Plans include rationales for interventions and provide specific guidelines for delivering effective nursing care. Patient Teaching boxes highlight important information for communicating continuing care instructions to patients and families. New and consolidated content on pain assessment and management focuses on this key aspect of pediatric nursing. Updated content on evidence-based practice illustrates how current research can be used to improve patient outcomes. The latest information in the field is included throughout, including expanded coverage of the late preterm infant and fetal heart rate pattern identification.

A History of the Theory of Investments - Mark Rubinstein
2011-09-02

"This exceptional book provides valuable insights into the evolution of financial economics from the perspective of a major player."
-- Robert Litzenger, Hopkinson Professor Emeritus of Investment Banking, Univ. of

Pennsylvania; and retired partner, Goldman Sachs A History of the Theory of Investments is about ideas -- where they come from, how they evolve, and why they are instrumental in preparing the future for new ideas. Author Mark Rubinstein writes history by rewriting history. In unearthing long-forgotten books and journals, he corrects past oversights to assign credit where credit is due and assembles a remarkable history that is unquestionable in its accuracy and unprecedented in its power. Exploring key turning points in the development of investment theory, through the critical prism of award-winning investment theory and asset pricing expert Mark Rubinstein, this groundbreaking resource follows the chronological development of investment theory over centuries, exploring the inner workings of great theoretical breakthroughs while pointing out contributions made by often unsung contributors to

Neuroscience - Dale Purves
2004-01-01

Neuroscience is a comprehensive textbook created primarily for medical and premedical students; it emphasises the structure of the nervous system, the correlation of structure and function, and the structure/function relationships particularly pertinent to the practice of medicine. Although not primarily about pathology, the book includes the basis of a variety of neurological disorders. It could serve equally well as a text for undergraduate neuroscience courses in which many of the students are premeds. Being both comprehensive and authoritative, it is also appropriate for graduate and professional use. The new edition offers a host of new features including a new art program and the completely revised Sylvius for Neuroscience: Visual Glossary of Human Neuroanatomy, an interactive CD-ROM reference

guide to the human nervous system. Major changes to the new edition also include: additional neuroanatomical content, including two appendices-(1) The Brainstem and Cranial Nerves and (2) Vascular Supply, the Meninges, and the Ventricular System; and updated and new boxes on neurological and psychiatric diseases.

Microbial Enzymes and Biotechnology - W.M. Fogarty
2012-12-06

Biotechnology is now one of the major growth areas in science and engineering and within this broad discipline enzyme technology is one of the areas earmarked for special and significant developments. This publication is the second edition of Microbial Enzymes and Biotechnology which was originally published in 1983. In this edition the editors have attempted to bring together accounts (by the relevant experts) of the current status of the major areas of enzyme technology and specifically those areas of actual and/or

potential commercial importance. Although the use of microbial enzymes may not have expanded at quite the rate expected a decade ago, there is nevertheless intense activity and considerable interest in the whole area of enzyme technology. Microbial enzymes have been used in industry for many centuries although it is only comparatively recently that detailed knowledge relating to their nature, properties and function has become more evident. Developments in the 1960s gave a major thrust to the use of microbial enzymes in industry. The commercial success of alkaline proteases and amyloglucosidases formed a bed-rock for subsequent research and development in the area.

Bouton--Boughton Family - James Boughton 1890

Teaching Kids to Care - Sharon Vincz Andrews 1999-04-28
Considers how values can be taught effectively in public schools. Follows a program initiated in a fifth-grade

classroom in Indiana. Provides an outline through which students can reflect on behavior and relate their responses to their own actions.
Fatigue of Aircraft Structures - United States. Naval Air Systems Command 1966

Case Studies in Pain

Management - Alan David Kaye 2014-10-16

Edited by internationally recognized pain experts, this book offers 73 clinically relevant cases, accompanied by discussion in a question-and-answer format.

Bilingual Education - Mildred L. Larson 1981

This book reports on an experimental bilingual education program conducted in Peru by Peruvian educators and Summer Institute of Linguistics (SIL) linguists. Sections of the book discuss: (1) the historical perspective of the program; (2) program aspects such as teacher training, goals, and curriculum; (3) what this program may contribute to the development of future programs; (4) the

preparation of materials in vernacular languages; and (5) bilingual education as it relates to the development of indigenous communities. Papers include "The Role of Vernacular versus Prestige Languages in Primary Education" and "Training to Train: The Key to an Ongoing Program" by Mildred L. Larson, "The Training of Bilingual Teachers" by Olive A. Shell, and "The Challenges of Primer Making" by Patricia M. Davis. Tables include teacher-training course statistics, curriculum and textbooks for bilingual schools, and a synopsis of SIL work among the Aguarunas. Figures include sample pages from texts, primers, and readers, and a variety of letters and forms for supervisory use. Photographs of students, teachers, and other community members are provided. Appendices include the resolution authorizing bilingual education in the Peruvian jungle, laws relating to bilingual education, and sample pages of the 1977 curriculum. (JK)

Theatre World - 1991

Déetectives - Herik Hanna
2016-08-24

En qualité de spécialiste du crime, le réputé docteur Eaton, bras droit de Nathan Else, témoigne lors du procès d'Elizabeth Pumcake, alias « le Monstre botté ». Quelques mois plus tard, on l'informe que la meurtrière, enfermée avec les pires criminels dans l'hôpital expérimental Beltran, demande à s'entretenir avec lui. Et pourtant... rien ne relie Lisbeth Pumcake au docteur. Intrigué, Eaton fait un premier pas... au coeur de la folie.

Neuroimaging of Sleep and Sleep Disorders - Eric Nofzinger
2013-03-07

An up-to-date, superbly illustrated practical guide to the effective use of neuroimaging in the patient with sleep disorders. The only book to date to provide comprehensive coverage of this topic. A must for all healthcare workers interested in understanding the causes, consequences and treatment of sleep disorders.

Cognition and Emotion - Jan

de Houwer 2010-05-09
Emotions are complex and multifaceted phenomena. Although they have been examined from a variety of perspectives, the study of the interaction between cognition and emotion has always occupied a unique position within emotion research. Many philosophers and psychologists have been fascinated by the relationship between thinking and feeling. During the past 30 years, research on the relationship between cognition and emotion has boomed and so many studies on this topic have been published that it is difficult to keep track of the evidence. This book fulfils the need for a review of the existing evidence on particular aspects of the interplay between cognition and emotion. The book assembles a collection of state-of-the-art reviews of the most important topics in cognition and emotion research: emotion theories, feeling and thinking, the perception of emotion, the expression of emotion, emotion

regulation, emotion and memory, and emotion and attention. By bringing these reviews together, this book presents a unique overview of the knowledge that has been generated in the past decades about the many and complex ways in which cognition and emotion interact. As such, it provides a useful tool for both students and researchers alike, in the fields of social, clinical and cognitive psychology.

Urolithiasis in Clinical

Practice - Said Abdallah Al-Mamari 2017-10-11

This book serves as a concise guide to urinary stone disease, providing simplified and complete information about the topic area. Various surgical techniques are provided and accompanied by first-hand accounts, to give insight into the operating room. The book is a quick reference guide and is relevant to both trainees and professionals. Written by a leading expert in the field, this book brings together years of experience and contains essential information on all aspects of lithology. The book

covers all treatment options so that the best possible methods can be chosen for each patient. Urinary stone disease is a widespread ailment and updated information about it is permanently needed by trainees and professionals.

The Piper Model - Dennis Piper
2017-04-28

This book is intended to be both a practical evidence-based tool and an awareness-raising resource for teachers, teaching assistants, mentors and all adults who work with children and young people who present as 'extremely challenging' in the school context. In every school there are a small number of pupils, less than five percent, who take up more than fifty percent of the staff's time. This book provides school staff with an approach to personalised interventions that enable those children or young people to build life-long resilience skills.

The Geology of Stratigraphic Sequences -

Andrew D. Miall 2013-06-29

Sequence stratigraphy represents a new paradigm in

geology. The principal hypothesis is that stratigraphic successions may be subdivided into discrete sequences bounded by widespread unconformities. There are two parts to this hypothesis. First, it suggests that the driving forces which generate sequences and their bounding unconformities also generate predictable three-dimensional stratigraphies. In recent years stratigraphic research guided by sequence models has brought about fundamental improvements in our understanding of stratigraphic processes and the controls of basin architecture. Sequence models have provided a powerful framework for mapping and numerical modeling, enabling the science of stratigraphy to advance with rapid strides. This research has demonstrated the importance of a wide range of processes for the generation of cyclic sequences, including eustasy, tectonics, and orbital forcing of climate change. The main objective of this book is to document the sequence record

and to discuss our current state of knowledge about sequence-generating processes.

How Tobacco Smoke Causes Disease - 2010

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying

those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Fake? - Mark Jones 1990-01-01 Describes the methods used to make artistic, literary, documentary, and political forgeries and the recent scientific advances in their detection. Includes over 600 objects from the British Museum and many other major collections, from ancient Babylonia to the present day.

Apocalypse When? - Willard Wells 2010-03-26

This book will be a key trailblazer in a new and upcoming field. The author's predictive approach relies on simple and intuitive probability formulations that will appeal to readers with a modest knowledge of astronomy, mathematics, and statistics. Wells' carefully erected theory stands on a sure footing and thus should serve as the basis of many rational predictions of survival in the face of not only natural disasters such as hits by asteroids or comets, but perhaps more surprisingly from

man-made hazards arising from genetic engineering or robotics. Any formula for predicting human survival will invite controversy. Dr Wells counters anticipated criticism with a thorough approach in which four lines of reasoning are used to arrive at the same survival formula. One uses empirical survival statistics for business firms and stage shows. Another is based on uncertainty of risk rates. The third, more abstract, invokes Laplace's principle of insufficient reason and involves an observer's random arrival in the lifetime of the entity (the

human race) in question. The fourth uses Bayesian theory. The author carefully explains and gives examples of the conditions under which his principle is valid and provides evidence that can counteract the arguments of critics who would reject it entirely. His deflection of possible criticisms results from two major premises: selecting the proper random variable and "reference class" to make predictions, and the recognition that if one does not know the law that governs a process, then the best prediction that can be made is his own formula.
