Regulation of Coronary Blood Flow -

Michitoshi Inoue 2013-11-09

Research centering on blood flow in the heart continues to hold an important position, especially since a better understanding of the subject may help reduce the incidence of coronary arterial disease and heart attacks. This book summarizes recent advances in the field; it is the product of fruitful cooperation among international scientists who met in Japan in May, 1990 to discuss the regulation of coronary blood flow.

Pulse Waves - Paolo Salvi 2012-04-27

Recently, several studies have shown the crucial role of viscoelastic properties of the aorta and large arteries in determining blood pressure values. A good knowledge of cardiovascular

pathophysiology and vascular hemodynamics is necessary to understand these phenomena. However, available texts on this topic are very complex and difficult for medical practitioners to understand. The aim of this book is to enable the reader to comprehend the relation between cardiovascular pathophysiology and vascular hemodynamics and to become familiar with the more recent guidelines. While very complex physical concepts are involved, care has been taken to ensure that the explanations are as straightforward as possible. Complex analyses are presented separately and can be skipped by the reader without impairment of understanding. It is envisaged that the knowledge imparted will prove invaluable in improving the approach to hypertensive patients.

The Mystery of Hypertension - Hong Son Cheung 2008-12-16

About the Book The "Mystery of Hypertension" is an educated and non-fiction book for the reader who is wonder about the hypertension. In this book, it is tried to use non-scientific language to explore possible all the meaning about the hypertension. It begins with how blood pressure is measured and what these measuring mean. Following, explain what can affect the blood pressure in nature. Then, describing various kind of hypertension and why happened. Furthermore, mentioned the relationship between the diet and the hypertension. It also tried to draw the relationship among the drug, diet and hypertension. Finally, there is other concern referring to our health. For author's purpose, wishing this can help people to understand the hypertension for those interesting the health in hypertension.

The Handbook of Cuffless Blood Pressure Monitoring - Josep Solà 2019-08-21

This book is the first comprehensive overview of the emerging field of cuffless blood pressure monitoring. Increasing clinical evidence proves that longitudinal measurements of blood

pressure allow for earlier detection and better management of multiple medical conditions and for superior prediction of cardiovascular events. Unfortunately, today's clinical and industry standards for blood pressure monitoring still require the inflation of a pneumatic cuff around a limb each time a measurement is taken. Over the last decades clinicians, scientists and device manufacturers have explored the feasibility of technologies that reduce or even completely eliminate the need of cuffs, initiating the era of cuffless blood pressure monitoring. Among the existing literature, this book is intended to be a practical guide to navigate across this emerging field. The chapters of the handbook have been elaborated by experts and key opinion leaders in the domain, and will guide the reader along the clinical, scientific, technical, and regulatory aspects of cuffless blood pressure monitoring.

Development, Validation, and Clinical Application of a Numerical Model for Pulse Wave Velocity Propagation in a Cardiovascular System with Application to Noninvasive Blood Pressure Measurements - Jeffrey S. Lillie 2017

"High blood pressure blood pressure is an important risk factor for cardiovascular disease and affects almost one-third of the U.S. adult population. Historical cuff-less non-invasive techniques used to monitor blood pressure are not accurate and highlight the need for first principal models. The first model is a one-dimensional model for pulse wave velocity (PWV) propagation in compliant arteries that accounts for nonlinear fluids in a linear elastic thin walled vessel. The results indicate an inverse quadratic relationship ($R^2=.99$) between ejection time and PWV, with ejection time dominating the PWV shifts (12%). The second model predicts the general relationship between PWV and blood pressure with a rigorous account of nonlinearities in the fluid dynamics, blood vessel elasticity, and finite dynamic deformation of a membrane type thin anisotropic wall. The nonlinear model achieves the best match with the experimental data. To retrieve individual vascular information of a patient, the inverse problem of hemodynamics is presented, calculating local orthotropic hyperelastic properties of the arterial wall. The final model examines the impact of the thick arterial wall

with different material properties in the radial direction. For a hypertensive subject the thick wall model provides improved accuracy up to 8.4% in PWV prediction over its thin wall counterpart. This translates to nearly 20% improvement in blood pressure prediction based on a PWV measure. The models highlight flow velocity is additive to the classic pressure wave, suggesting flow velocity correction may be important for cuff-less, non-invasive blood pressure measures. Systolic flow correction of the measured PWV improves the R2 correlation to systolic blood pressure from 0.81 to 0.92 for the mongrel dog study, and 0.34 to 0.88 for the human subjects study. The algorithms and insight resulting from this work can enable the development of an integrated microsystem for cuff-less, non-invasive blood pressure monitoring."--Abstract.

EVALUATION OF BLOOD PRESSURE ESTIMATION USING PULSE TRANSIT TIME DURING CHANGES IN PHYSIOLOGICAL STATUS. - Amanda Nicole Sklarsky 2018

The nations leading cause of death since 1921 Cardiovascular Disease (CVD) is a pressing issue in society. Blood Pressure (BP) is a significant indicator of cardiovascular health and is thus central to much research. The issue lies in the fact that BP is generally not measured on a day-to-day basis, as the available forms of measurement are uncondusive to daily measurement (i.e. cuff-based, non-continuous, and/or invasive). Pulse Transit Time (PTT) the time delay between blood ejection to the heart to arrival at a peripheral point - is a promising metric in overcoming this issue and has been incorporated in a few wearable medical devices to date. This retrospective study aimed to determine whether PTT could withstand alterations in physiological status, specifically alterations in cardiac output and resistance. These changes were elicited via Cold Pressor Test (CPT) and Static Handgrip (SHG) protocols and were intended to reveal whether PTT is truly a reliable measurement that can be used in daily life by consumers of wearable medical devices. The results showed that there was in fact a significant difference between conditions

(CPT vs. SHG) in BP measurement. Thus, PTT may not be transferable across physiological conditions. In the form utilized in this investigation, PTT does not appear to be sufficiently accurate for use in wearable medical devices. However, the inverse relationship between PTT and BP was consistent with that of other research studies, so PTT may be useful in considering relative changes in BP. Further research might consider individualized calibration to overcome variability between subjects. Nevertheless, the significant difference between the physiological states calls into question the broad utility of estimations of BP from PTT. Estimates derived with this methodology should be interpreted conservatively.

The Association Between "leg Length to Height Ratio" and Blood Pressure in Peri-adolescents - Dilani Wijesena 2017

Background: Hypertension has a high prevalence in adults, and is a risk factor for cardiovascular diseases (CVD). Children and adolescents with higher levels of blood pressure tend to have high blood pressures as adults. Identifying children with higher levels of blood pressure would be critical for effectively implementing preventive measures among them. Stature components have been found to be associated with the risk of CVD in adults and some CVD risk factors in children. A few studies have found an association between leg length to height ratio (LLHR) and blood pressure in children; however, none of these studies have been in Canada. Objective: To ascertain the relationship between leg length to height ratio and blood pressure in Canadian youth. Methods: This cross-sectional analysis was done using data from the Heart Behavioural Environment Assessment Team (HBEAT) study, which was conducted with students from Niagara Catholic District School Board. Blood pressure and stature components of 689 students between the ages of 9-14 years were included for the analysis. The height range was 106.3 cm to

178.5 cm, and the blood pressure range was 67 mmHg to 142 mmHg for systolic blood pressure, and 30 mmHg to 96 mmHg for diastolic blood pressure. Regression models were used to examine relationships between LLHR and blood pressures. Results: In the regression analyses, for every one standard deviation increment in LLHR, the systolic, diastolic, pulse pressure, and mean arterial pressure were on average 1.08 mmHg (p

Stress and Hypertension - Kevin T. Larkin
2008-10-01

Does living a stress-filled life lead to elevated blood pressure? And if so, do strategies to better manage stress effectively lower blood pressure? In this authoritative and comprehensive book, Kevin T. Larkin examines more than a half-century of empirical evidence obtained to test the common assumption that stress is associated with the onset and maintenance of essential hypertension (high blood pressure). While the research confirms that stress does play a role in the exacerbation of essential hypertension, numerous other factors must also be considered, among them obesity, exercise, and smoking, as well as demographic, constitutional, and psychological concerns. The author discusses the effectiveness of strategies developed to manage stress and thereby lower blood pressure and concludes with suggestions and directions for further study.

Profiling Hackers - Raoul Chiesa 2008-12-11
Complex and controversial, hackers possess a wily, fascinating talent, the machinations of which are shrouded in secrecy. Providing in-depth exploration into this largely uncharted

territory, *Profiling Hackers: The Science of Criminal Profiling as Applied to the World of Hacking* offers insight into the hacking realm by telling attention-grabbing tales about bizarre characters that practice hacking as an art. Focusing on the relationship between technology and crime and drawn from the research conducted by the Hackers Profiling Project (HPP), this volume applies the behavioral science of criminal profiling to the world of internet predators. The authors reveal hidden aspects of the cyber-crime underground, answering questions such as: Who is a real hacker? What life does a hacker lead when not on-line? Is it possible to determine a hacker's profile on the basis of his behavior or types of intrusion? What is the motive behind phishing, pharming, viruses, and worms? After gaining notoriety for breaking into many high-profile computer systems, the Italian hacker Raoul Chiesa turned to ethical hacking in 1995. Today he uses his skills and abilities to find ways to protect networks and computer systems. Stefania Ducci is a member of the Counter Human Trafficking and Emerging Crimes Unit at the United Nations Interregional Crime and Justice Research Institute (UNICRI). Silvio Ciappi is a criminologist who lectures at the University of Pisa and studies criminal profiling. These three experts with vastly different backgrounds explore the clandestine network of cyber-criminals, providing an unparalleled glimpse into the secret lives of these malevolent individuals.

Blood Pressure and Arterial Wall Mechanics in Cardiovascular Diseases - Michel E. Safar
2014-07-30

In cardiovascular prevention, there is classically a small number of cardiovascular risk factors to treat, such as hypertension, diabetes, hyperlipidemia and smoking excess, which are widely detected and treated. Recently, it has been widely recognized that new mechanical factors should be detected and treated and involves specifically pulsatile arterial hemodynamic (PAH) parameters such as: arterial stiffness, pulse pressure, and, to a lesser extent, augmentation index and pulse pressure amplification. The pedagogic aspect of this new CV specialty involves 3 principal parts: a. -Basic concepts and pathophysiological mechanisms of

PAHb. -Clinical aspects and end-organ damage in PAHc. - Clinical pharmacology and therapeutics of PAH This book represents the first that spans basic science and clinical management of this new CV subspecialty. Much has been learned regarding the management of these patients in recent years and this book presents extensive data on the techniques needed to maximize outcomes.
