Headache - Todd J. Schwedt 2010-03-18

Headache is the most common presenting symptom in neurology and constitutes more than one-third of primary care consultations. Organized according to the presenting features of the headache (acute, episodic and chronic), this handbook provides diagnostic and treatment information for both common and uncommon causes of headache.

Making maximum use of lists, bullet points, summary boxes and illustrations, it allows the reader fast access to essential information where it is needed most. Each topic is dealt with succinctly, using up-to-date knowledge and experience of the authors, all of whom are headache experts from leading clinical centers in the USA and Canada. Providing comprehensive and detailed coverage to satisfy the needs of the busy neurologist, residents in neurology, neurosurgery, psychiatry and other fields of internal medicine, this book will also be a valuable guide to practising clinicians who do not deal with headache on a regular basis.

Little Green Men, Meowing Nuns and Head-Hunting Panics - Robert E. Bartholomew 2001-05-23

"For a two week period in 1956, residents in the vicinity of Taipei, Taiwan, lived in fear that they would be the next victims of a crazed villain who was prowling the streets and slashing people at random with a razor or similar weapon. At least 21 victims were reported during this period, mostly women and children of low income and education." A thorough investigation revealed however, that: "five slashings were innocent false reports, seven were self-inflicted cuts, eight were due to cuts rather than razors, and one was complete fantasy." This is one example of many cases of what has traditionally been called "mass hysteria" that are examined in this comprehensive study of human beings' fear of the unknown. Beginning with a concise history of mass hysteria and social delusions, the author differentiates between the two and investigates mass hysteria in closed settings such as work and school, and mass hysteria in communities with incidents such as gassings, Pokemon illnesses in Japan, and medieval dance crazes. Also examined are collective delusions, with information on five major types:

immediate threat, symbolic scare, mass wish fulfillment, urban legends and mass panics. The book ends with a discussion of major issues in the area of mass hysteria and a look toward the future of this intriguing subject.

Evaluation of Clinical Biofeedback - Rogers 2012-12-06

This comprehensive survey will be useful for anyone who seriously wants to learn more about the current therapeutic status of biofeedback-therapists, physicians considering a referral, well-educated prospective patients, teachers, students, and research workers. But readers with different needs should use it in different ways. For a quick overview of a large field, one should turn to the Introduction and Summary and Conclusions sections. The reader interested in a specific disease should look for the proper section in the Table of Contents and then turn to the overall summary at the end of that section and also the briefer summaries that are given in the last paragraph of many subsections, whenever sufficient data are available. The reader who wants more information should read the entire chapter. The serious student or research worker, for whom the book will be most valuable, will want to read more of the main volume and at least to sample the Appendix to see the kinds of information that can be mined from it. When patients are satisfied with a new treatment and seem to be improved by it, why bother with any additional evaluation? The reason is that history has shown over and over again that new forms of treatment initially can be used enthusiastically for many conditions with apparent success, only to have the pendulum swing in the opposite direction from overenthusiasm to complete disillusionment.

Migraine - Robert A. Davidoff 2002-02-14

Migraine: Manifestations, Pathophysiology, and Management, Second Edition, is a much expanded, updated monograph that focuses in detail on migraine's diverse variations, its pathophysiology, and its treatment. Authored by a clinician/scientist who himself suffers from migraine, the book's premise is that the clinical significance of migraine and its treatment are intelligible only if the physician understands the anatomical, physiological, and pharmacological factors underlying both head pain and the other manifestations of migraine. The book provides clear clinical descriptions of the myriad of specific migraine syndromes, and discusses the rationale for, and elements of, a sensitive, inclusive patient history. Also covered are important but sometimes ignored topics such as environmental triggering of migraine and myofascial syndromes. The Second Edition also bridges the gap between basic science and clinical practice by explaining those substantive advances made in understanding fundamental mechanisms of head pain and aura. Recent knowledge about genetics, hormonal changes, cerebral circulation, nitric oxide, peptides, central sensitization of trigeminal neurons, and the role of periaqueductal gray matter buttress the discussion of basic mechanisms. On the treatment side, the Second Edition reflects the impressive advances in pharmacological approaches to migraine. There is a greatly expanded section on the triptans and their mechanisms of action, and rationales and practical information about the use of all other viable anti-migraine and prophylactic drugs. Psychobiological aspects of stress and stress management, elimination of environmental stimuli, the educational facets of management, and aspects of the patient/physician interaction so crucial in the treatment of migraine are all discussed. Special problems associated with the care of women, children, the elderly, patients with intractable headaches, and emergency department patients are thoroughly reviewed. In sum, this scholarly, well-referenced book offers in one volume a comprehensive scientific and clinical discussion of migraine headache.

Stroke Diaries - Olajide Williams, MD 2010-04-23

A woman recounts the horror of waking up paralyzed, unable to call for help. A man has a mini-stroke and refuses to listen to his doctor, only to suffer a disabling stroke soon after.
