Gone Viral Justin Hart 2022-10-18 Data and marketing consultant and statistical sage to presidential candidates, governors, businesses, and the real powers-that-be, epidemiologists, Justin Hart catalogs in a terrifying-but-sprightly manner the folly and psychosis produced by the pandemic and diagnoses the societal destruction that the massive overresponse to the COVID virus has wreaked, as well as what can be done to stop the madness and bring the world back to a modicum of rationality. WORST. DISEASE. EVER. Someone broke America. In this nightmare, neighbors have turned into agoraphobes, teachers fear their students, children are muzzled, citizens are censored, dystopian fictions have become reality, and unelected officials are creating a biometric police state. Oh wait. It's not a nightmare. It's our daily lives! In truth, much of this insanity didn't start with the coronavirus pandemic (it was already latent in big government and big corporations) and it won't end there. COVID-19's greatest threat turned out to be . . . mental. All we had to fear was fear itself—and boy did some of us fear! The very idea of the virus weakened the immune system of America and revealed a decaying underbelly of confusion, panic, unease, and cowardice few of the strong ones suspected existed. What a horrible wake-up call! In a spate of anxious dread and gleeful power-grabbing, our health overlords threw away the pandemic response handbook and tried—beyond all reason—to protect, well, everyone. From massive over-testing to universal retail plexiglass to stay-at-home orders to stay-away-from-school orders to masking mandates to vaccine mandates to some of the worst restrictions on civil liberties in American history, this is an epic story that poses big questions about America's future as a free society. And the odd thing is, as Justin Hart shows, the actual disease was, as pandemics go, not that threatening; most people were at minimal risk. What is really scary is the total overreaction of half the country, many governments, that lost all sense of perspective. Hart offers a hopeful prescription on how we might face the madness down and claw our way back to sanity!

Vaccination Investigation Tara Haelle 2018-01-01 Vaccines are biological substances that cause the human immune system to build up its defenses against specific diseases. Public health officials recommend a series of vaccines for all children, as well as some vaccines for teenagers and adults. But not everyone gets the vaccines they need. Many poor nations don't have the resources to deliver vaccines to every community. Some parents refuse to have their children vaccinated because they don't believe the evidence proving that vaccines are safe. The effort to wipe out diseases using vaccines continues. Vaccine Investigation recounts the fascinating history of vaccines, their important role in protecting community health, and the

excitement of cutting-edge research.

Overkill Paul Offit 2020-06-02 Is lowering your temperature when you have a fever helpful? Do you really need to finish every course of antibiotics? Or could some of the treatments you think are healing you actually be harming you? Medicine has significantly advanced in the last few decades. But while we have learned a lot, we still rely on medical interventions that are vastly out of date and can adversely affect our health. In this game-changing book, infectious-disease expert and Rotavirus vaccine inventor Dr Offit highlights fifteen common medical interventions still recommended and practised by medical professionals, despite clear evidence that they are harmful — including the treatment of acid reflux in babies and the reliance on heart stents and knee surgery. By presenting medical alternatives, *Overkill* gives patients invaluable information to help them ask their doctors better questions and to advocate for their own health.

Framework for Equitable Allocation of COVID-19 Vaccine National Academies of Sciences, Engineering, and Medicine 2020-11-30 In response to the coronavirus disease 2019 (COVID-19) pandemic and the societal disruption it has brought, national governments and the international community have invested billions of dollars and immense amounts of human resources to develop a safe and effective vaccine in an unprecedented time frame. Vaccination against this novel coronavirus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), offers the possibility of

significantly reducing severe morbidity and mortality and transmission when deployed alongside other public health strategies and improved therapies. Health equity is intertwined with the impact of COVID-19 and there are certain populations that are at increased risk of severe illness or death from COVID-19. In the United States and worldwide, the pandemic is having a disproportionate impact on people who are already disadvantaged by virtue of their race and ethnicity, age, health status, residence, occupation, socioeconomic condition, or other contributing factors. Framework for Equitable Allocation of COVID-19 Vaccine offers an overarching framework for vaccine allocation to assist policy makers in the domestic and global health communities. Built on widely accepted foundational principles and recognizing the distinctive characteristics of COVID-19, this report's recommendations address the commitments needed to implement equitable allocation policies for COVID-19 vaccine.

Growth Hormone Deficiency in Adults Jens O. L. Jørgensen 2005-01-01 It has been known for over 40 years that GH-deficient-children benefit from replacement with the hormone. But GH, essential for longitudinal growth, also plays a role after completion of final height. With the introduction of biosynthetic human GH 20 years ago, the use of GH was no longer restricted to severe growth retardation in hypopituitary children. This book will take the reader behind the myths of GH and into the real world of clinical endocrinology. The contributions stem from recognized clinicians and scientists who have been working in the field for decades. The contents encompass traditional end points of GH therapy such as body composition, bone biology and physical performance. Attention is also devoted to diagnostic aspects and side effects. Additional features range from clinical epidemiology to quality of life, and novel areas such as the impact of traumatic brain injury on pituitary function are also covered. The present volume of *Frontiers of Hormone Research* is essential reading for health care professionals interested in clinical endocrinology and GH.

Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis National Academies of Sciences, Engineering, and Medicine 2020-04-24 Among the many who serve in the United States Armed Forces and who are deployed to distant locations around the world, myriad health threats are encountered. In addition to those associated with the disruption of their home life and potential for combat, they may face distinctive disease threats that are specific to the locations to which they are deployed. U.S. forces have been deployed many times over the years to areas in which malaria is endemic, including in parts of Afghanistan and Iraq. Department of Defense (DoD) policy requires that antimalarial drugs be issued and regimens adhered to for deployments to malaria-endemic areas. Policies directing which should be used as first and as second-line agents have evolved over time based on new data regarding adverse events or precautions for specific underlying health conditions, areas of deployment, and other operational factors At the request of the Veterans Administration, *Assessment of Long-Term Health Effects of Antimalarial Drugs When Used for Prophylaxis* assesses the scientific evidence regarding the potential for long-term health effects resulting from the use of antimalarial drugs that were approved by FDA or used by U.S. service members for malaria prophylaxis, with a focus on mefloquine, tafenoquine, and other antimalarial drugs that have been used by DoD in the past 25 years. This report offers conclusions based on available evidence regarding associations of persistent or latent adverse events.

COVID-19 and Perinatology Daniele De Luca 2023-06-21 COVID19 pandemics has had profound consequences on public health and has represented a challenge for several medical specialties. Despite this was underestimated at the beginning of the outbreak, COVID19 is actually impacting on women and children health, as well. The consequences in this field are multifaceted and complex as they span from the occurrence of COVID19 in pregnant patients, to the possibility of SARS-CoV-2 mother-to-child transmission, the occurrence of neonatal COVID and pediatric sequelae. COVID19 and the related public health measures may also have important consequences on psychological well-being and organization of perinatal care as well as they raise relevant ethical issues. All these aspects were at risk to be forgotten within the many others highlighted by the pandemics but are important both for individual care and also from a political point of view and the organization of care. There is a large demand of high-quality education, information and training in this field and we answered that by organising the COVID19 in Pregnancy and Childhood Days: this book represents the hard legacy of this event with the contribution of key opinion leaders in all the aforementioned specialties. The book is answering a clear need and is directed to: 1) obstetricians, 2) neonatologists, 3) pediatricians, 3) public health specialists, 4) adult critical care physicians, 5) infectious disease specialists, 5) psychologists. Last but not least, the informations resumed in the book are going to be useful for healthcare authorities to program perinatal care and improve it. The book will also serve as textbook for post-graduate courses and academic review resuming the state-of-the art knowledge on this area. Thus, it will be cited and used by researchers in the field: this is not a secondary characteristics as it may be quite difficult to find relevant informations, in this infodemic era, using the usual channels and databases.

The Vaccine Joe Miller 2022-02-01 Winners of the Paul Ehrlich Prize The dramatic story of the married scientists who founded BioNTech and developed the first vaccine against COVID-19. Nobody thought it was possible. In mid-January 2020, Ugur Sahin told Özlem Türeci, his wife and decades-long research partner, that a vaccine against what would soon be known as COVID-19 could be developed and safely injected into the arms of millions before the end of the year. His confidence was built upon almost thirty years of research. While working to revolutionize the way that cancerous tumors are treated, the couple had explored a volatile and overlooked molecule called messenger RNA; they believed it could be harnessed to redirect the immune system's forces against any number of diseases. As the founders of BioNTech, they faced widespread skepticism from the scientific community at first; but by the time Sars-Cov-2 was discovered in Wuhan, China, BioNTech was prepared to deploy cutting edge technology

and create the world's first clinically approved inoculation for the coronavirus. The Vaccine draws back the curtain on one of the most important medical breakthroughs of our age; it will reveal how Doctors Sahin and Türeci were able to develop twenty vaccine candidates within weeks, convince Big Pharma to support their ambitious project, navigate political interference from the Trump administration and the European Union, and provide more than three billion doses of the Pfizer/BioNTech vaccine to countries around the world in record time. Written by Joe Miller—the Financial Times' Frankfurt correspondent who covered BioNTech's COVID-19 project in real time—with contributions from Sahin and Türeci, as well as interviews with more than sixty scientists, politicians, public health officials, and BioNTech staff, the book covers key events throughout the extraordinary year, as well as exploring the scientific, economic, and personal background of each medical innovation. Crafted to be both completely accessible to the average reader and filled with details that will fascinate seasoned microbiologists, The Vaccine explains the science behind the breakthrough, at a time when public confidence in vaccine safety and efficacy is crucial to bringing an end to this pandemic.

Immunization Safety Review Institute of Medicine 2002-07-02 By two years of age, healthy infants in the United States can receive up to 20 vaccinations to protect against 11 diseases. Although most people know that vaccines effectively protect against serious infectious diseases, approximately one-quarter of parents in a recent survey believe that infants get more vaccines than are good for them, and that too many immunizations could overwhelm an infant's immune system. The Immunization Safety Review Committee reviewed the evidence regarding the hypothesis that multiple immunizations increase the risk for immune dysfunction. Specifically, the committee looked at evidence of potential biological mechanisms and at epidemiological evidence for or against causality related to risk for infections, the autoimmune disease type 1 diabetes, and allergic disorders.

Immunisation against infectious diseases David Salisbury 2006-12-11 This is the third edition of this publication which contains the latest information on vaccines and vaccination procedures for all the vaccine preventable infectious diseases that may occur in the UK or in travellers going outside of the UK, particularly those immunisations that comprise the routine immunisation programme for all children from birth to adolescence. It is divided into two sections: the first section covers principles, practices and procedures, including issues of consent, contraindications, storage, distribution and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage Payment Scheme; the second section covers the range of different diseases and vaccines.

The Pandemic of Argumentation Steve Oswald 2022-02-25 This open access book addresses communicative aspects of the current COVID-19 pandemic as well as the epidemic of misinformation from the perspective of argumentation theory. Argumentation theory is uniquely placed to understand and account for the challenges of public reason as expressed through argumentative discourse. The book thus focuses on the extent to which the forms, norms and functions of public argumentation have changed in the face of the COVID-19 pandemic. This question is investigated along the three main research lines of the COST Action project CA 17132: European network for Argumentation and Public PoLicY analysis (APPLY): descriptive, normative, and prescriptive. The volume offers a broad range of contributions which treat argumentative phenomena that are directly related to the changes in public discourse in the wake of the outburst of COVID-19. The volume additionally places particular emphasis on expert argumentation, given (i) the importance expert discourse has had over the last two years, and (ii) the challenges that expert argumentation has faced in the public sphere as a result of scientific uncertainty and widespread misinformation. Contributions are divided into three groups, which (i) examine various features and aspects of public and institutional discourse about the COVID-19 pandemic, (ii) scrutinize the way health policies have been discussed, debated, attacked and defended in the public sphere, and (iii) consider a range of proposals meant to improve the quality of public discourse, and public deliberation in particular, in such a way that concrete proposals for argumentative literacy will be brought to light. Overall, this

volume constitutes a timely inquiry into all things argumentative in pandemic discourse. This volume is of interest to a broad readership including philosophers, linguists, communication and legal scholars, and members of the wider public who seek to better understand the discourse surrounding communicative phenomena in times of crisis.
